Including computing and refining initial set of coefficients for basis functions and also using the refined coefficients and orthogonal basis functions to predict a plurality of relationships between data sets. These limitations are in independent claims 29, 62 and 68.
- Gills (US Patent 6,523,026) and Agrawal et al. (US Patent 6,233,575) both teach classification and cluster documents. Gills teaches the automated generation of an abstract representation of terms from a first user selected knowledge domain, said representations encoding the co-occurrence patterns of terms characteristic of the source domain and an application of said representation of the efficient discovery of analogous objects in one or more semantically distant target domains. Agrawal teaches a system for organizing a large text database into a hierarchy of topics and for maintaining this organization as documents are added and deleted and as the topic hierarchy changes.
